Overview

Description

CAT5 KVM switch can control multiple computers form a set of consoles (monitor, keyboard and mouse).

There is no better way to save time and money than with a CAT5 LED console installation. By using the CAT5 LED console with its sliding LED console to manage your installation, you will gain below benefits: (1) eliminate the expense of purchasing separate keyboards, monitors and mice; (2) save all the space those extra components would take up; (3) save space that a keyboard, monitor and mouse would take with a standard KVM switch; (4) save on energy costs; and (5) eliminate the inconvenience and wasted effort involved in constantly having to move from on computer to another.

It is easy and fast to install the CAT5 KVM switch; you just need to connect corresponding cables to the right ports of the CAT5 KVM and its module without software configuration.

It's easy access to any selected computer via front panel LEDs or OSD menu, allowing convenient auto scan feature auto scanning and monitoring selected computers.

CAT5 KVM switch can connect multiple computers with RJ-45 connector and CAT5 connecting cables. Transmission distance is up to 100M, so it doesn't need a KVM extender.

Features

- Access and control up to 8 /16 /32 computes
- Supports Multiple systems: PC, Mac, Sun etc.
- Two level password security-only authorized users view and control computers; up to four users and an administrator with a separate profile for each
- Users can set up different hot keys([Scroll Lock] / [Caps Lock] / [F12] / [Ctrl]), auto scanning time, port display time, log out time, buzzer on/off and mouse on/off according to their different needs
- Convenient computer switching via mouse
- Broadcast mode--operations simultaneously performed on all selected computers
- No software--switching port via front panel LEDs and OSD menu
- Hot pluggable --add or remove computers without having to power down the switch
- Auto scan feature for monitoring user-selected computers
- Keyboard and mouse emulation function.

Hardware Installation

Rack Mounting

The Cat5 KVM switch will be installed in the front or rear rack cabinet. Make sure all the connecting computers as well as external device are shut down.

Installation instruction:

1) Remove the front or rear screw

2) Screw the bracket to the front or rear part of the KVM switch

3) Screw the KVM device to the rack cabinet (front or rear part)

Structure and Size

Rear View

No.	Explanation
1	Power Socket
2	Power Switch
3	Local Console
4	KVM Console
5	Ground connecting screws

8 Port /16 Port /32 Port

Installation Instruction

Installation steps:

- 1) Make sure the KVM has been connected to the ground.
- 2) Connect KVM adapter to the host computer.
- 3) Connect KVM adapter to any available KVM port with CAT5 cable.
- 4) Connect the local console (keyboard, monitor and mouse) to the console port.
- 5) Plug the female port of the power cable in the KVM power socket, and plug the male port in the AC power port.

Diagram 2.4 Install KVM components

Note:

1. If cascading required, please connect KVM console and KVM switch with adapter (\bigcirc), and Hotkey need to be different with KVM console and KVM switch.

Please check the hotkey setting

FAQ

1. There is no image after open up. Solutions:

- 1) Check the power LED, if it is not keeps on, check the 220V power input.
- 2) Make sure the monitor is connected and power on.

2.No password window pops up after boot, there is no response from the keyboard Solutions:

- 1) Make sure the keyboard is OK.
- 2) Plug out the USB keyboard, then plug in and the keyboard indicating LED flash once.

3.Enter the password window and select one port, there is no host computer screen. Solutions:

1) Check the current port, make sure it has connected to the host computer, make sure the host computer output video signal.

- 2) Check the LED of corresponding port (green and orange light keep on at the same time).
- 3) Check the network cable connection.
- 4) Check the module connection.
- 5) Change a normal module to that port, if OK then the module is damaged.

4. Poor display quality of PC screen.

Solutions:

- 1) Adjust the definition and brightness.
- 2) Use good quality network cable such as CAT5 cables or upper.
- 3) Shorten the network cable length.
- 4) Lower the display resolution.

6. When I switch to one port, the keyboard and mouse do not work.

Solutions:

1)Make sure you have exited the OSD menu, we have entered the OSD menu if we can't operate the host computer via keyboard and mouse at this moment.

2)Make sure we can operate the OSD menu via keyboard and mouse, is so the KVM is OK.

3)Moving the mouse or clicking keyboard to see whether the KVM switching module orange LED is flashing, if not, please change a module.

4)Reboot the host computer; make sure the KVM module has been connected to the host computer before boot.
