User Notification

All information, documentation, and specifications contained in this manual are subject to change without prior notice. The manufacturer does not make any explicit or implied statement or guarantee about the contents of this document, especially for merchantability or fitness for any specific purpose. Any manufacturer's equipment described in this manual is sold or licensed as it is.

If the equipment is damaged artificially after purchase, the buyer (not the manufacturer, its distributor or reseller) shall bear all costs for necessary repair and any losses caused by equipment defects.

If the correct operating voltage setting is not selected before operation, the manufacturer will not be responsible for any damage caused by system operation.

Please make sure the voltage has been set correctly before use.

1. Introduction

The KFH186K IP KVM matrix extenders are highly optimized KVM extenders. The point-to-point connection supports transmission distance of 120m, and resolution up to 3840x2160@60Hz. This series of extenders can be connected to an 1G network switch to form a matrix switching system, which supports point-to-point (P2P) mode and matrix (Matrix) mode. The matrix switching system composed of extenders supports up to 9999 nodes by using a centralized management software, and it can support up to 40 nodes without using a centralized management software. It can connect multiple signal sources (such as servers, workstations, cameras and video walls).

With the matrix switching system, computers and servers can be located in the central server room far from the workstation to improve security, reduce the temperature and noise of the working environment, and achieve a quiet and friendly human-computer interaction environment.

The video compression algorithm of KFH186K matrix extender is a perfect combination of high-quality image and low latency (<8ms). The USB and video signals are transmitted through CAT5e/6/7 network cable.

It supports USB devices such as touch screen, USB sound card, printer, etc., it can also support USB storage devices.

1.1 Function

This product is intended to be used as a device to increase the distance that a keyboard, monitor and mouse can be placed from a computer. This product is intended for professional use. The product should not be used in potentially explosive environments.

The product may only be used according to the instructions as described in this manual. All use, other than that described in this manual, is seen as unintended use. In this product, the product connected to the host end is called the transmitter (TX), and the product connected to the display end is called the receiver (RX).

1.2 Feature

- HDMI / USB2.0/Audio - IP KVM Matrix Extender
- Single and Dual screen version
- Point-to-point connection supports maximum extension distance 120m/394ft
- Can be connected to a standard network switch to form a matrix switching system
- Support seamless switching
- Freeze the last image after the disconnection of transmitter and receiver
- Support resolution up to 3840x2160@60Hz (4:4:4)
- USB transmission rate up to 480Mbit/s
- HDMI lossless real-time full HD transmission
- Support local (TX) HDMI interface loop-out
- Support transmission through fiber optic and network (CAT5e/6/7)
- Support one Administrator account and one User account
- Support remote computer power on and off

1.3 Safety Instructions

WARNING! Read and understand all safety instructions.

- Please follow all instructions. This will avoid accidents, fire, explosions, electric shocks or other hazards that may result in damage to property and/or severe or fatal injuries. Please ensure that everyone who uses the product has read and followed these warnings
- Keep all safety information and instructions for future reference and pass them on to subsequent users of the product.
- The manufacturer is not liable for cases of material damage or personal injury caused by incorrect handling or non-compliance with the safety instructions. In

such cases, the warranty will be voided.

- The product is not allowed to use in potentially explosive environments.
- Check the product and the cables for any damage before use. If there is any visible damage, a strong odour, or excessive overheating of components unplug all the connections immediately and stop using the product.
- If the product is not installed and used in accordance with this manual, it may cause disruptive interference with radio or television reception or affect other electronic products in residential areas.
- Use shielded cables to connect components to avoid the above interference.
- Only the power adapter included with the product should be used as the power supply. Do not use other adapters.
- Make sure your local voltage matches the rating indicated on the product before powering on it.
- The product must be connected to a permanent and earthed AC wall socket.
- Protect cables from being strained, pinched or buckled and place them in a way to prevent people from tripping over the cord.
- Avoid any damage to power adapter.
- Use the product with a suitable, properly installed and easily accessible power socket to make sure the product can be disconnected from the power socket at all times.
- Disconnect the product when not in use.
- Never touch the adapter with wet hands.
- Use the product within the specified performance limits.
- Keep the product away from any flammable materials like curtains.
- Protect the power adapter from use by third parties (particularly children).
- Keep the product away from heater.
- Do not drop or hit the product.

1.4 Product Overview

KFH186K receiver (TX)

No.	Components		Description
1	LED	POWER	Power indicator
		FIBER	Connection indicator of FIBER
		LINK	Connection indicator
		SLED	System indicator
2	USB HID		connect to PC or server
3	Rx Tx + GND - Pw		Reserved interfaces
4	FIBER		Fiber interface
5	LAN		LAN interface
6	IN		HDMI video input
7	USB IN		USB-B, connect to PC or server
8	DBG		Debug interface
9	AIN		Audio input
10	AOUT		MIC output
11	DC1, DC2		Connect to the 12V power supply
12	GND		Ground the device

KFH186K sender (RX)

No.	Components	Description	
1	LED	POWER	Power indicator
		FIBER	Connection indicator of FIBER
		LINK	Connection indicator
		SLED	System indicator
2	SW	Remote power on/off button	
3	USB2.0	Connect to USB2.0 peripherals	
4		Connect to a USB keyboard	
5		Connect to a USB mouse	
6	RJ11	Reserved interfaces	
7	FIBER	Fiber interface	
8	LAN	LAN interface	
9	OUT	HDMI video output	
10	DBG	Debug interface	
11		MIC input	
12		Audio output	
13	DC1, DC2	Connect to the 12V power supply	
14		Ground the device	

*SW key: The “- +” interface of [Rx Tx +  - Pw] on Transmitter end is required to connect to the computer and the computer need to be set up.

2. Installation

2.1 Installation of Extender

Warning! Please read and be aware of all safety instructions before installing the equipment. The extender can be set as a point-and-point mode to access a single PC, and also can access multiple PCs through matrix switching system.

Matrix switching system

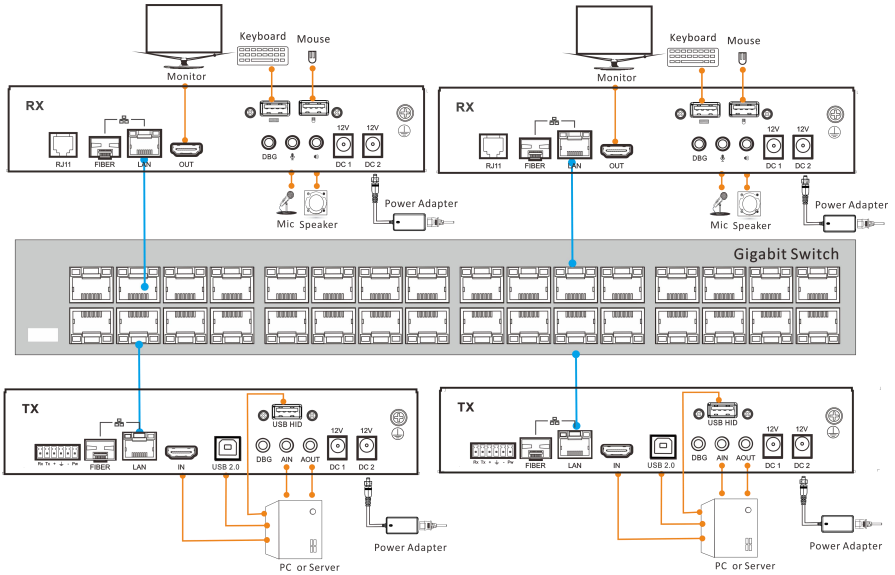

Connection Diagram of KFH186K

1. Make sure the KVM extender is grounded (See ① in the above diagram)
2. Connect the KFH186K_TX to the HDMI video port, USB port and audio port of a computer. (See ② in the above diagram)
3. Connect the KFH186K_RX to keyboard, mouse, monitor and audio device. (See ③ in the above diagram)
4. Connect the transmitter and receiver interfaces via optical fiber or CAT5E cable. (See ④ in the above diagram)
5. Power on the transmitter and receiver. (See ⑤ in the above diagram)
6. Connect the USB peripheral to the receiver (KFH186K_RX) (See ⑥ in the above diagram)

Matrix Connection Diagram

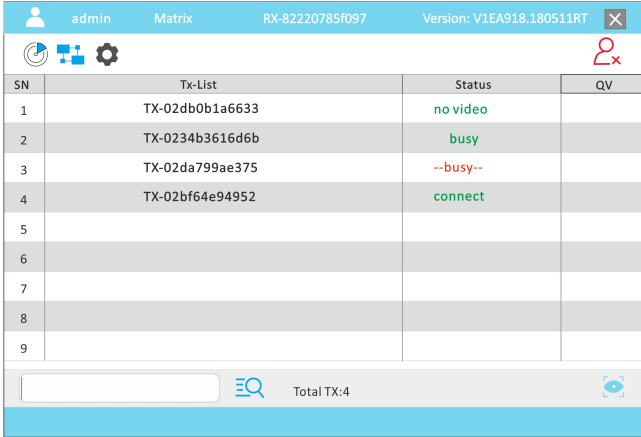

Configuration requirements: The electrical port of the network switch must reach a gigabit rate and support IGMP multicast.

3. Extender Configuration

3.1 Use of UI Interface

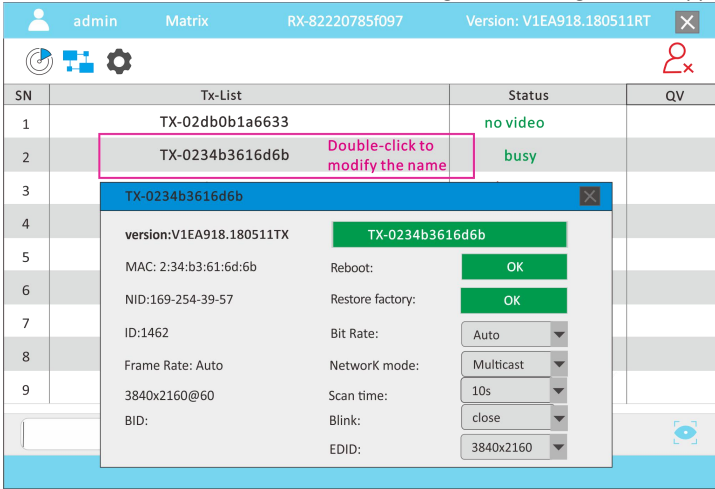

Press the left [Ctrl] key on the keyboard 3 times continuously, then the main UI interface will display.

Function Name	Description
Mode	Node Matrix P2P
	Scan device list
	The list of matched transmitter and receiver
	Setting of function key
	Click 【Equipment setting】 - 【User Setting Pass】 to logout user account
SN	Number of connected devices
TX_List	List of transmitters
Status	Busy: TX and RX are paired --Busy-- : The RX has been connected to a TX No video: There is no video input from the host Connect: Can be connected
QV	Select Scan device
	Find the devices in the list
	Auto Scan

[Name Setting of TX_List]

Double-click the name of a TX, and then the following name setting window appears.

Function Name	Description
TX-0234b3616d6b	Click to change the name of TX, and then click “ESC” button to confirm your modification.
Reboot	Reboot the device
Restore factory	Restore Factory Defaults
Bit Rate	Auto, 10M ,50M, 100M, 150M, 200M

The screenshot shows a web interface for an IP KVM Matrix Extender. At the top, there is a header bar with a user icon, the name 'admin', the device name 'Matrix', the ID 'RX-82220785f097', and the version 'Version: V1EA918.180511RT'. A red 'X' icon is in the top right corner. Below the header, the main content area is divided into two columns. The left column displays 'Operating mode: Matrix' and 'system state:'. Under 'system state:', there are four toggle switches, each with a green checkmark: 'Usb', 'Audio', 'KM', and 'Share'. Below these are system details: 'Output timing: 1080p@60', 'Total TX: 4 Total RX:2', 'MAC: 82:22:7:85:f0:97', 'MID: 169-254-39-57', 'BID: 000000000000-0', and 'Version: V1EA918.180511RT'. The right column contains a vertical menu with buttons: 'Equipment info' (highlighted in green), 'Equipment setting', 'Frame push', 'Frame Get', 'Update', and 'Hotkeys'.
